OTHER RESEARCH

Cornell Pandemic Modeling Group **March 2020 – December 2022**

Modeled classroom transmission using Monte Carlo simulation to assess student and instructor risk. Analyzed the impact of university reopening, weather, and compliance to shutdowns on pandemic spread. Presented various data analyses and visualizations to Cornell senior leadership to support decisions on COVID-19 interventions. (https://datasciencecenter.cornell.edu/covid-19-modeling/)

Cornell Pandemic Reopening Planning **March 2020 – September 2020**

Modeled student movement and behavior on campus using mobility and university internal data. Leveraged models to identify congested sidewalks and bus routes and predict potential hotspots for transmission. Tested various de-densification strategies using agent-based simulations and submitted the most effective methods to the provost. Assisted scheduling socially distanced classrooms. Public Transit Route Optimization **August 2019 – March 2020**

Developed predictive models using farebox and vehicle location data to estimate rider demand on bus routes in Tompkins County. Used demand estimates to redesign the county's second busiest bus route to improve efficiency. Changes were implemented by Tompkins County Area Transit (TCAT) in Fall 2020.
